

KISHAN KUMAR A

Senior Frontend Developer

+91-9900752384 | kishankumar12324@gmail.com | Mangaluru, India | Experience: 5 Years 6 Months

PROFILE SUMMARY

Skilled Frontend Developer with 5 years and 6 months of experience building responsive, scalable, high-performance web and mobile applications using React.js (React 18) and React Native. Strong experience in state management (Redux/Redux Toolkit), RESTful API integration (including Microsoft Graph), unit testing with Jest, Enzyme, and React Testing Library, cross-browser compatibility, and performance optimization using Lighthouse and Core Web Vitals. Delivered multi-portal e-commerce platforms, real-time collaboration tools, and Microsoft Teams-integrated applications with modern build tooling (Webpack, Vite, Babel) and CSS frameworks (Material UI, Tailwind CSS, Bootstrap). Also bring hands-on experience with Generative AI-powered agentic applications and IoT/BLE device integration. Adept at Agile practices, version control with GitLab/Bitbucket, and producing reliable, user-centric solutions.

SKILLS

JavaScript, TypeScript, IndexedDB, React.js (React 18), Redux, Redux Toolkit, HTML5, CSS3, Material UI, Tailwind CSS, Bootstrap, RESTful APIs, Responsive Design, Cross-Browser Compatibility, Webpack, Vite, Babel, Lighthouse, Core Web Vitals, Jest, Enzyme, React Testing Library, Socket.io, SIP, MQTT (WebSockets), Git, Jira, React Native, Node.js, Generative AI, Agentic AI Integration, OpenAI API, WebRTC, BLE

CERTIFICATIONS

- Web Developer

WORK EXPERIENCE

Senior Front End Engineer — Logichive Solutions Private Limited

Mar 2021 – Present

- Developed a tablet-based virtual assistant application with voice-driven interactions and meeting-room assistance, integrating meeting controls and voice-command features.
- Built responsive web applications using React.js and implemented robust unit testing with Jest, Enzyme, and React Testing Library.
- Developed cross-platform mobile applications using React Native for iOS and Android.
- Integrated Microsoft Graph RESTful APIs to access meeting and user information for Teams-enabled applications.
- Participated in Agile Scrum ceremonies including sprint planning, daily stand-ups, and retrospectives to improve delivery.
- Managed version control using GitLab and Bitbucket.
- Contributed to a Teams messaging app enabling unified messaging across multiple platforms, improving collaboration workflows.

PROJECTS

Teams Application — Contact & Unified Messaging Platform

- Built a responsive Microsoft Teams-integrated web application, hosted on Azure and embedded as a Teams app, structured around two core modules: Contacts and Messaging, styled using Tailwind CSS with support for switching between light and dark app themes.
- Contact Module: integrated Microsoft Graph RESTful API to sync and manage the full organizational contact directory, supporting ~50,000 contacts client-side.
- Persisted the large contact dataset in IndexedDB for fast, offline-capable access, and implemented virtualized list rendering so scrolling through tens of thousands of contacts stayed smooth without freezing the UI.
- Messaging Module: built a unified messaging interface allowing users to message contacts across WhatsApp, WeChat, and LINE via integrated third-party RESTful APIs, alongside native Teams messaging.
- Implemented SIP (Session Initiation Protocol)-based backend communication to support real-time messaging and calling within the app.
- Handled authentication, RESTful API integration, error handling, and performance improvements for a responsive Teams app, using Lighthouse audits and Core Web Vitals metrics to guide optimization.
- Used Webpack, Vite, and Babel for build tooling, bundling, and JavaScript transpilation across the application.

Granite Block Mart — E-Commerce Portal for Stone Quarry

- Built the responsive frontend for a multi-portal e-commerce platform for a stone quarry business, comprising separate Seller, Admin, and Buyer portals, using React.js, TypeScript, Redux, and Material UI.
- Developed the Buyer portal for product browsing, catalog search, and order placement; the Seller portal for inventory and listing management; and the Admin portal for platform oversight and order/user management.
- Developed reusable UI components and integrated RESTful APIs for product catalog, pricing, and order management across all three portals, with a shared theming system supporting light/dark mode.
- Used Socket.io to power real-time order status and inventory updates across the Seller, Admin, and Buyer portals.
- Implemented unit tests to ensure code quality and reliability across core components.

Task Management System

- Built the responsive frontend of a task management application using React.js (React 18), TypeScript, Redux, and Material UI, featuring drag-and-drop task ordering and configurable workflows.

- Integrated RESTful APIs for task, comment, and attachment CRUD operations, alongside Socket.io for real-time collaboration and live updates across users to improve team productivity.
- Developed reusable, accessible UI components with Material UI, including a theming system that let users switch between light and dark app themes, to maintain a consistent design system across the application.

Cybersecurity Training & Virtual Education Platform

- Developed the frontend for a responsive virtual training platform (cybersecurity lab-focused) using React.js, Redux, and Redux-Persist, with Material UI as the component and styling library, including light/dark theme switching.
- Integrated a third-party WebRTC SDK to enable room creation, joining, and live audio/video/screen-share, allowing trainers to host live sessions and invite participants.
- Built a video-assignment feature allowing trainers to assign pre-recorded training videos to participants across Windows and Linux, ensuring continuity for learners without native Linux access.
- Implemented remote virtual-machine provisioning, giving participants on low-configuration devices on-demand access to high-configuration VMs for hands-on lab exercises.
- Built collaborative learning features including an interactive whiteboard, gamification elements, and embedded coding questions to keep users engaged during live sessions.
- Integrated MQTT over WebSockets as a lightweight publish/subscribe protocol for real-time, low-latency live session updates in the browser, alongside RESTful APIs for session, user, and training-content management across the platform.

Agentic AI Voice Assistant — Device & Meeting Companion

- Built the frontend for a cross-platform (iOS & Android) Generative AI-powered agentic voice assistant using React Native (TypeScript) that reduces manual effort in joining and managing meetings.
- Integrated a real-time voice-agent SDK from the frontend and built the client application with Redux Toolkit and Tailwind CSS, layering a WebRTC-based communication module for seamless meeting controls.
- Implemented voice-triggered meeting controls (join, mute, unmute, audio, video, screen-share) and Microsoft Graph RESTful API integration for meeting and user context.

Vehicle Load Monitoring System — React Native Sensor Application

- Built a cross-platform React Native (Android & iOS) application reading real-time sensor data to support truck/trailer load and center-of-gravity monitoring.
- Synced processed sensor and load data to backend services via RESTful APIs for centralized monitoring and reporting.

INTERNSHIPS

Web Development Bootcamp — Newton School

- Learned full-stack web development technologies including HTML, CSS, JavaScript, React.js, Node.js, Express.js, and MongoDB.
- Built web projects and gained hands-on experience in front-end and back-end integration and application deployment.

EDUCATION

B.Tech / B.E. — Electronics and Telecommunication Engineering

2016 – 2020

Visveswaraiah Technological University (VTU) — Grade: 6.5/10

12th Standard

2016

Karnataka State Board, English medium — 67%

10th Standard

2014

Karnataka State Board, English medium — 77%

ACHIEVEMENTS & CONTRIBUTIONS

- Active contributor to Microsoft Teams-integrated applications and cross-platform React Native projects, driving integrations with Microsoft Graph and real-time communication features.
- Active blood donor and participant in community blood donation activities.

ADDITIONAL INFORMATION

Hobbies: Travelling

Languages: English, Kannada, Hindi
